Bosch GET65-5N 5 In. Dual-Mode Random Orbit Sander

This ergonomically designed 5 In. sander features both a standard random-orbit mode and a direct-drive, eccentric-orbit turbo mode for aggressive stock removal. The Bosch GET65-5N Dual-Mode Random Orbit Sander's turbo mode delivers 3X the removal rate of standard random-orbit action. It has a tapered top handgrip with soft-grip design. The auxiliary handle mounts on either side of the sander for outstanding control. The sander features an enhanced multihole pad system that is compatible with a wide variety of abrasive discs. The random-orbit action both orbits and rotates to provide a well-blended, ultra-smooth surface finish. It is built with an integral pad-dampening braking system to help prevent swirl marks, plus it has a soft microcellular hook-and-loop backing pad. The die-cast aluminum gear housing with dual-bearing pad mount helps lessen vibration. This tool has an enhanced dust-collection system for maximum efficiency when used with a vacuum cleaner and hose. Large channels in the pads allow debris to be easily pulled through vacuum port.
